Design of the brochure:

Explanation:

This brochure was designed with a modern and professional layout to attract students interested in Software Engineering. A blue and white color palette was used to represent technology, trust, and academic professionalism while keeping the design clean and visually balanced. The tri-fold structure organizes information clearly, allowing readers to easily explore program details, key features, admission information, and contact details without confusion. Bold headings and readable typography improve visual hierarchy and readability. Icons and student imagery were added to create engagement and make the brochure feel more student-friendly and realistic. The front panel focuses on a strong "Admission Open" message with a clear call-to-action, while the inside panels highlight learning opportunities, labs, internships, and career growth. Overall, the brochure was designed to look simple, attractive, original, and informative for prospective students.
